

WEDNESDAY, APRIL 10 2013 SAFETY PRESENTATION
Sam Altshuler

"Sam Altshuler discussing the safety hazards of potential forces, uses a large spring to demonstrate how storage of energy in a spring, for example, can create a potential safety hazard. A member of the audience recounted how gravity imposed on a large object of his was responsible for a recent significant accident on his part. The message: Think ahead for potential problems involving forces e.g. gravity, springs, and other forces."
